Eco-Bag™

The environmentally friendly manure bag

50 years!
WIEFFERINK

New manure storage system from Wiefferink: the Eco-Bag™

The advantages are:

- Odour-free manure storage thanks to anti-odour unit
- Eco-green colour blends sympathetically into landscape

The Wiefferink Group is introducing an environmentally friendly manure bag, the Eco-Bag™. This Eco-Bag™ manure bag is Wiefferink's ultimate solution to odour-free manure storage. At the same time, the eco-green colour is subtle and blends in sympathetically with its surroundings.

The rules and regulations concerning manure spreading are becoming steadily more stringent. This means that manure prices will continue to rise significantly in the short term and certainly in the long term. Recent media reports indicate that there is more and more resistance to the presence of large and obtrusive sealed plastic manure heaps in the vicinity of villages and towns. This is on the one hand because of the fear that such manure bags will lead to odour nuisance and on the other hand because people generally feel that a grey plastic manure bag does not belong in the landscape.

Wiefferink has come up with a solution for these problems in the form of the new eco-green, odour-free manure bag: the Eco-Bag™. The new ecological-green colour which has been chosen is a result of research carried out into how to ensure the manure bag can blend into the landscape more sympathetically. The new Wiefferink manure bag is also fitted with an anti-odour unit which purifies any gases before they are released, thereby eliminating local complaints about odour nuisance.

New

THE ADVANTAGES OF THE MANURE BAG:

- Fast supply and assembly
- Can also be positioned on soft foundations
- KIWA suitability certificate
- Portable
- Can be assembled and dismantled quickly
- Easy to supply with mix systems
- Includes an inspection opening
- Odour-free storage
- Eco-green storage

Working with Wiefferink means working together with a flexible and progressive organisation. We have our own engineering department, and most of the know-how we have built up during the last fifty years relates to our knowledge of complex and unusual ways of storing and covering.

QUALITY

We have more than fifty years of experience in designing and manufacturing flexible solutions in metallised film, both nationally and internationally. Quality is of vital importance. Wiefferink develops innovative production techniques and uses high-quality foil materials. All our products are thoroughly tested and inspected before use. To do this, we have developed our own testing facilities and quality programmes. We are KIWA and ISO 9001: 2000 certified.

PRODUCTION METHODS (FLEXIBLE SOLUTIONS)

All our products are manufactured from flexible synthetic materials. Thanks to our years of experience in processing high-quality foils, we have the most advanced production methods at our disposal, such as laser-controlled high frequency welding machines and precision equipment. Our production methods guarantee a constant and proven quality.
